Daniel Brodsky
Software Engineer

Experience

Security Software Engineer

TELUS '16 – '17

Worked on Project Argus, a system designed to automate detecting and response to internal network intrusions. Helped create a front-end system for client monitoring and integrate quantious amounts of data into a client interface.

Python, Django, JavaScript, SplunkJS, Pentaho

Personal work

Twitch Tours

A web application build using Node.js and Express.js, designed to give users the ability to parse through chatlogs from streams on Twitch.tv and find entertaining moments in previously-recorded videos, which can then be downloaded.

JavaScript, NodeJS, ExpressJS, Python

Master of Many

A video game for desktop and mobile built using Unity, where the player controls multipe individual units in real-time, each with their own set of abilities, with the main goal being to wipe out the enemy player's units.

(Work in progress)

C#, Unity, JavaScript

Education

B. Sc, Computer Science major, 3rd/4th year

University of British Columbia

'14 – Dec '18
